

A b s t r a c t

The invention relates to a document of value, in particular a bank note, with at least one pair of luminescent substances associated to each other having a first and a second luminescent substance, which emit in a joint emission region located outside the visible spectral region. According to the invention the emission spectra of the first and second luminescent substance overlap each other in at least a partial area of the said emission region in such a way, that the emission spectrum of the first luminescent substance is complemented by the emission spectrum of the second luminescent substance.
